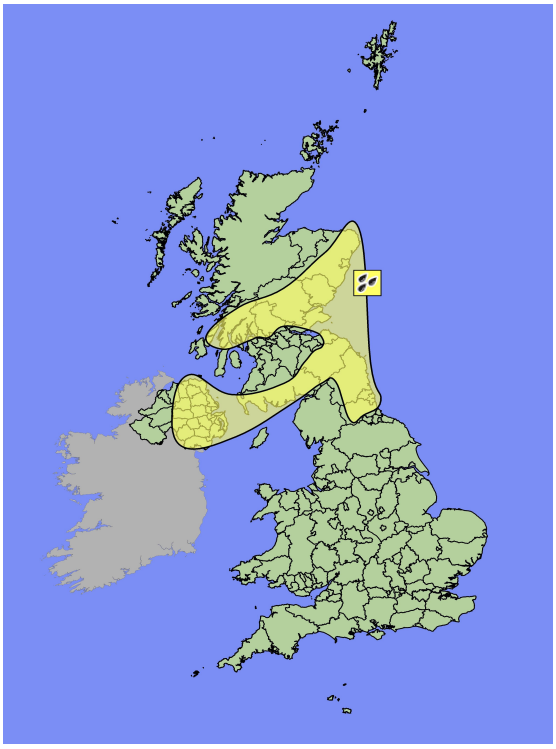
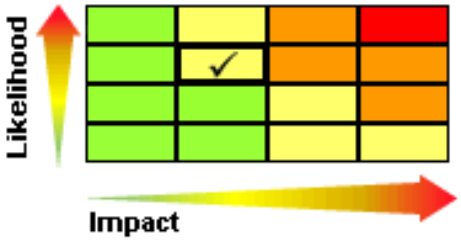
National Severe Weather Warning Service





Chief Forecasters Assessment
A slow moving frontal zone and strong southeasterly winds will lead to persistent and often heavy rain across parts of the north and northeast of the UK during Thursday, with snow accumulating above 500-600 metres. Rainfall totals of 20-30 mm are expected fairly widely, with 50 mm or more expected over southeast facing slopes of eastern Scotland.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **00:05 on Thu, 20th Dec 2012** until **23:59 on Thu, 20th Dec 2012**

Persistent, and often heavy rain, will affect much of central and eastern Northern Ireland, eastern and parts of central and southern Scotland and parts of the northeast of England during Thursday. The rain will be accompanied by strong to gale southeasterly winds with very rough seas also developing on some North Sea coasts. On the higher hills, snow is expected with blizzard conditions affecting the mountains.

The public should be aware of the risk of localised flooding and travel disruption.
